SeeFix

It sees the part. It checks your work.

Camera-first repair copilot · Meta Global AI Developer Hackathon
Indie track · Build for Your World · Green Robin Labs

Live: https://seefix.vercel.app · Repo: github.com/dl88jing/seefix

Home repair fails at the wrong part.

- First-time renters guess which part to buy and which step is next.
- YouTube and manuals do not watch your hands or confirm the fix.
- A wrong part or unsafe step wastes a weekend and can flood a bathroom.
- Family help is often a shaky video call from hundreds of miles away.

SeeFix watches the job and gates every step.

Identify	Muse Spark Open reads the model plate from a photo → make/model/part.
Segment	SAM 3.1 outlines the exact part on the live frame.
Safety	Muse Glimmer (open weights on Modal) blocks unsafe steps.
Card	Muse Image draws the next step on the user's own photo.
Verify	Spark + SAM confirm the step is done before advancing.

Hero: toilet flapper replacement

- Avery's toilet runs all night. Morgan wants proof the part matches.
- Upload the tank plate → Spark Open returns American Standard Cadet 3 + flapper.
- SAM outlines the flapper; Glimmer clears the step; Image annotates the frame.
- After the swap, verification: PASS with evidence — then call it done.

Live lab: https://seefix.vercel.app/lab

Demo video ~76s (under the 3-minute cap): HyperFrames + Kokoro narration

Six Meta capabilities, each doing real work

Model	Where	Job
Muse Spark Open	Baseten	Plate OCR + structured identify JSON
SAM 3.1	Meta Model API	Part masks on the user’s frame
Muse Glimmer	Modal / open weights	Safety gate before each step
Muse Image	Meta Model API	Step cards edited onto real photos
Spark (verify)	Baseten / Meta	Video/clip “is it fixed?” verdict
Rate limits	Modal quota	Fail-closed IP + global caps

Next.js 15 on Vercel · fail-closed safety

- Browser camera → /api/segment (SAM) · /api/identify (Spark Open)
- /api/safety → Muse Glimmer on Modal (Standard-mode privacy; no training)
- /api/card → Muse Image annotated step card
- Per-IP 20/h and global 200/day identify limits via Modal quota service
- Public health: /api/health reports configured providers (no secrets)

Why this wins Impact + Demo

- Real household problem with a clear user (first-time fixer / distant family).
- Closed-loop: identify → segment → safety → annotate → verify — not a chat wrapper.
- Open-weight Glimmer + Spark Open qualify for Best Build on Open Weight Models.
- Working live demo + narrated video under 3 minutes.
